Robert Cozzetto
Assistant Plant Facilities Administrator
Lindenhurst School District
PO Box 621
Lindenhurst, NY 11757

Dear Mr. Cozzetto;

On March 10th CTI Environmental Consultants conducted a bioaerosol microbial survey of classroom 146 in the High School. It appears that the levels of fungal organisms found in classroom 146 may be considered to be within acceptable levels. In addition, there were no mold odors detected nor were there any signs of visible mold growth within the classroom. The results of the microbial survey may be found in Table A below.

Table A

| Sample Number | Location | Fungal Organisms Colony Forming Units (CFU's) | Colony Forming Units level |
|---------------|---------------|-----------------------------------------------------|-------------------------------|
| 1 | Classroom 146 | 176 Cladosporium Penicillium Alternaria | Acceptable Level |
| 2 | Ambient | 12 Penicillium | Ambient |

If you should have any questions regarding this report, please contact Charlie Erlanger at 631 277-4579.

Very truly yours,

CTI Environmental Consultants

Charlie Erlanger, CIAQP
